

CSC-310 Team Contract

Description of project: For our final project we are going to be making a weather predicting app. For this app, we are going to be using a training data set of previous weather outputs. Our website will allow us to make predictions of components of the weather if you have all other data given. One example of this could be a prediction of the temperature if all other query data is given.

Team Responsibilities:

Nick:

- Is working on creation and evaluation of the driving prediction models
- Data processing and cleaning
- Export the models to the website
- Cried the most during development

Elijah:

- Working on the layout of the website
- Taking the exported models to run on the ui website
- Letting the user input all data except one

Jason:

- Is working on creation and evaluation of the driving prediction models
- Data processing and cleaning
- Export the models to the website
- Broke the most keyboards during development

Signatures:

Jason Fopiano, ELIJAH CASTILLO, *Nicholas Kurgan*
